

GathUr — Product Introduction (V1)

Helping Churches Build Community Beyond Sunday

Introduction

The Church has always been about people.

Long before buildings, technology, or organizations, the Church was a community—a place where people worshiped together, encouraged one another, served alongside each other, and built lasting relationships rooted in faith.

While churches continue to gather every week, one challenge remains nearly universal:

Helping people move from attending church to truly belonging within it.

Every Sunday, visitors walk through church doors hoping to find more than a sermon. They hope to find friendships, mentors, accountability, opportunities to serve, and a place they can call home.

Many never do.

Not because churches don't care.

But because building community at scale is incredibly difficult.

GathUr exists to help churches solve that challenge.

Our Vision

GathUr is a community platform built specifically for churches.

Its purpose is simple:

Help every visitor become a member.

Help every member find community.

Help every church become a place where no one feels alone.

Rather than functioning as another church management system or communication app, GathUr focuses on one of the most important parts of ministry:

Helping people build meaningful relationships.

The Problem

Churches have become incredibly effective at communication.

They have software for:

- Online giving
- Livestreaming
- Sermon notes
- Event registration
- Push notifications
- Church announcements
- Volunteer scheduling
- Member databases

Yet one of the biggest challenges churches continue to face isn't communication.

It's connection.

Every week people quietly ask themselves:

- How do I meet people?
- How do I join a Bible study?
- How do I find friends?
- Who can I pray with?
- How do I start serving?
- How do I find an accountability partner?

Many churches already have "New Here" or "Start Here" areas designed to welcome visitors.

Guests meet friendly volunteers.

Receive welcome gifts.

Fill out connection cards.

Join email newsletters.

Receive updates throughout the week.

While this creates a wonderful first impression, the process often ends there.

The church knows how to contact the visitor.

The visitor still doesn't know anyone.

The Opportunity

Imagine walking into church for the very first time.

Instead of simply filling out a connection card...

A volunteer invites you to scan a QR code.

Within minutes you:

- Create your profile.
- Select your interests.
- Share your life stage.
- Choose what you're looking for.

Then immediately discover:

- Bible studies.
- Small groups.
- People with similar interests.
- Young adult events.
- Prayer groups.
- Volunteer opportunities.
- Members grabbing lunch after second service.

Instead of leaving with a newsletter...

You leave already beginning your journey toward community.

Why GathUr?

Today's church community is often spread across multiple disconnected tools.

A single young adults ministry may use:

- iMessage
- GroupMe
- Partiful
- Email
- Instagram
- Google Forms
- Church Center

Each tool solves one small problem.

None were designed to build church community.

GathUr brings those experiences together into one platform built specifically for churches.

One place to:

- Meet people.
 - Build friendships.
 - Organize gatherings.
 - Join groups.
 - Share prayer.
 - Serve together.
 - Stay connected throughout the week.
-

Core Philosophy

Technology should never replace ministry.

It should strengthen it.

Churches already spend countless hours manually:

- Connecting visitors
- Introducing members
- Organizing Bible studies
- Coordinating volunteer teams

- Following up on prayer requests
- Planning hangouts
- Creating group chats
- Finding accountability partners

These are incredibly valuable ministries.

They're also incredibly manual.

GathUr automates much of the coordination so pastors, staff, volunteers, and ministry leaders can spend less time managing logistics and more time investing in people.

The goal isn't to automate relationships.

The goal is to automate everything surrounding them.

Core Features (MVP)

The first version of GathUr focuses on solving one problem exceptionally well:

Helping people find their place within the church community.

Church Verification

Verified members create trusted, church-specific communities.

Member Profiles

Members can share:

- Interests
- Hobbies
- Life stage
- Ministries
- Service attendance
- Looking for:
 - Friends
 - Prayer partners
 - Accountability partners
 - Small groups

- Serving opportunities
-

Smart Community Matching

Members receive recommendations based on:

- Shared interests
- Life stage
- Ministries
- Service times
- Church campus
- Community goals

The MVP intentionally uses transparent recommendation logic rather than artificial intelligence, allowing recommendations to remain simple, understandable, and effective.

Small Groups

Discover:

- Bible Studies
 - Men's Groups
 - Women's Groups
 - Young Adults
 - Young Families
 - Recovery Groups
 - Prayer Groups
 - Ministry Teams
-

Events

Browse:

- Church events
- Ministry gatherings
- Community meetups
- Volunteer opportunities

RSVP directly inside the app.

Community Posts

Simple posts help spontaneous community happen naturally.

Examples include:

"Who's grabbing coffee after second service?"

"Anyone up for pickleball Saturday?"

"Looking for a prayer partner."

"Anyone interested in starting a men's Bible study?"

Instead of collecting everyone's phone numbers and creating multiple group chats, members simply join the conversation within GathUr.

Prayer Requests

A dedicated space where members can encourage one another and pray together throughout the week.

Serving

Discover volunteer opportunities based on interests and ministry needs.

Church Updates

Announcements, schedules, sermon resources, and important communications live alongside the community experience.

Long-Term Vision

The vision for GathUr extends far beyond communication.

The goal is to become a **Community Health Platform** for churches.

Today churches can answer questions like:

- How many people attended?
- How much was given?
- How many people joined a group?

But the questions that matter most are often much harder to answer.

- Who feels lonely?
- Who hasn't built meaningful friendships?
- Who is quietly drifting away?
- Who wants to serve?
- Who needs encouragement?
- Which visitors haven't connected with anyone yet?

Healthy churches are built upon healthy relationships.

By understanding community engagement—not simply attendance—church leaders gain greater visibility into opportunities to care for their congregation before people fall through the cracks.

Success is measured not only by attendance.

It is measured by belonging.

Artificial Intelligence Roadmap

Artificial intelligence is intentionally **not** the foundation of GathUr.

The platform first focuses on building meaningful community through thoughtful design and strong recommendation systems.

As GathUr grows, AI becomes a quiet assistant working behind the scenes to strengthen relationships—not replace them.

Future AI capabilities may include:

Personalized Community Recommendations

Suggest members with similar interests, ministries, schedules, and spiritual goals.

Event Recommendations

Recommend Bible studies, volunteer opportunities, and church events based on participation and relationships.

Community Building

Recognize shared interests among members and recommend starting new groups or recurring activities.

Example:

"Six members attend second service, live nearby, and enjoy hiking. Consider creating a Saturday hiking group."

Visitor Onboarding

Create personalized pathways helping visitors become active members of the church community.

Prayer Follow-up

Help members remember to check in after prayer requests while encouraging ongoing care.

Sermon Conversations

Generate discussion prompts that help Sunday's message continue throughout the week.

Ministry Recommendations

Recommend serving opportunities aligned with each member's interests, consistency, and strengths.

AI should never replace pastors.

It should never replace volunteers.

It should never replace friendships.

Its role is to quietly surface opportunities for connection that people might otherwise miss.

Business Model

GathUr follows a Software-as-a-Service (SaaS) model designed for churches.

Church members always use GathUr free of charge.

Example pricing:

- Free — Churches under 100 members
- Starter — Small churches
- Growth — Mid-sized churches
- Enterprise — Large and multi-campus churches

Additional offerings may include:

- Fully branded church applications
 - Administrative dashboards
 - Community analytics
 - Multi-campus management
 - Custom integrations
 - Premium onboarding and support
-

The Future of Church Community

Churches have spent thousands of years helping people build relationships.

GathUr doesn't seek to change that mission.

It exists to strengthen it.

By bringing community, communication, events, prayer, serving, discipleship, and relationship-building into one purpose-built platform, churches can replace fragmented workflows with a unified experience centered around people—not technology.

At its heart, GathUr isn't building another church app.

It is building the infrastructure for stronger church communities.

Because everyone deserves more than just attending church.

Everyone deserves to find their people.

Brand Statement

GathUr

Gather Together. Grow Together. Belong Together.
